Yorks

THE "OTLEY" ELECTRIC TRACTOR

USED with Trailers, supplies the most economical form of transport for short distance work, such as that between Works and Railway Stations.

The running expenses of the Tractor are very low, and the use of Trailers means that valuable vehicles are not kept waiting a great part of their time while loading and unloading takes place. Trailers are comparatively cheap, and it is usually possible to employ existing four-wheel lorries, replacing the shafts by a coupling bar.

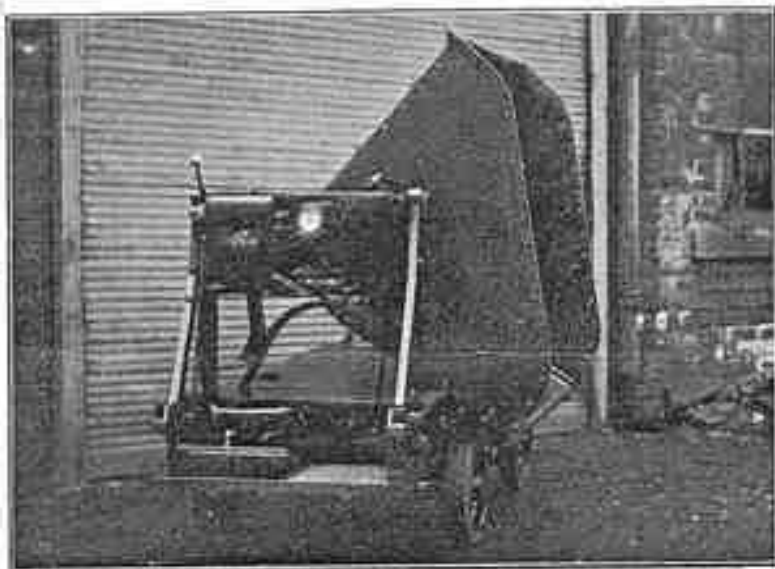

"Otley" Tractor with 6-ton Trailer.

The Tractor is driven by two powerful motors which obtain their current from the large traction battery carried on the frame. A very powerful and even starting torque is obtained, and the loaded Trailer is moved off without any jerk or slipping.

In yards where single railway waggons have to be moved along the line from time to time, the Tractor can be employed instead of a gang of men, whilst it is also very useful on main work for drawing in cables, etc.

Charging the Battery is a simple matter, and can be done at night, or at off peak times. The Standard Battery requires about 28 units of electricity for a full charge, and electricity can usually be obtained at 1d. per unit for this purpose.

First Cost Repaid in one year, by Savings.

OTLEY TIPPING TRUCKS

Form an extremely useful group of utility machines with a range of 7—50 cwt., and some of these are here illustrated.

'A' Type either side Steel Tipper

Ideal for transferring bulk materials.
Quick and easy to manipulate.

Will go anywhere in your yard or out of it.

Replaces Conveyors and overhead Transporters at a fraction of the cost.

Road End Tipping Truck.

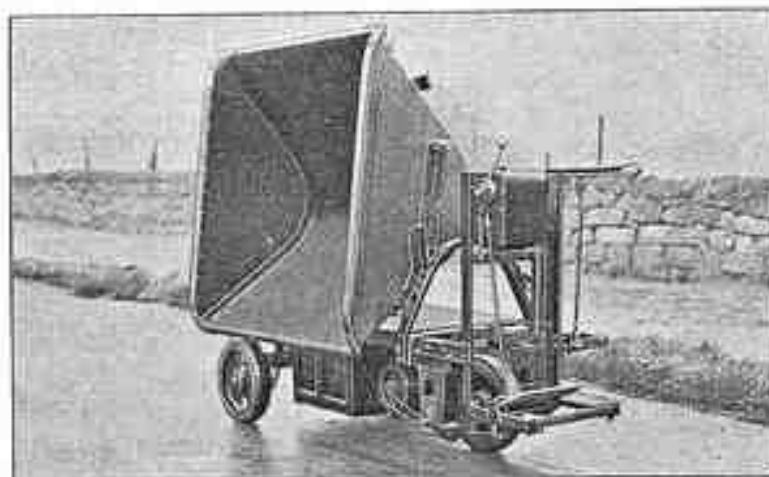

For coal, ashes, night soil, etc.

Note low loading line and ease of control.

Very suitable for narrow passages, cul-de-sacs, etc.

Quick loading from railway wagons.

When fitted with flat body, makes the **cheapest possible method** of delivering milk, etc., where frequent stops and limited radius exist.

Bantam either side Steel Tipper

Specially suited for light, bulky loads such as coke.

Simplest possible drive.

Simplest possible control.

Robust.

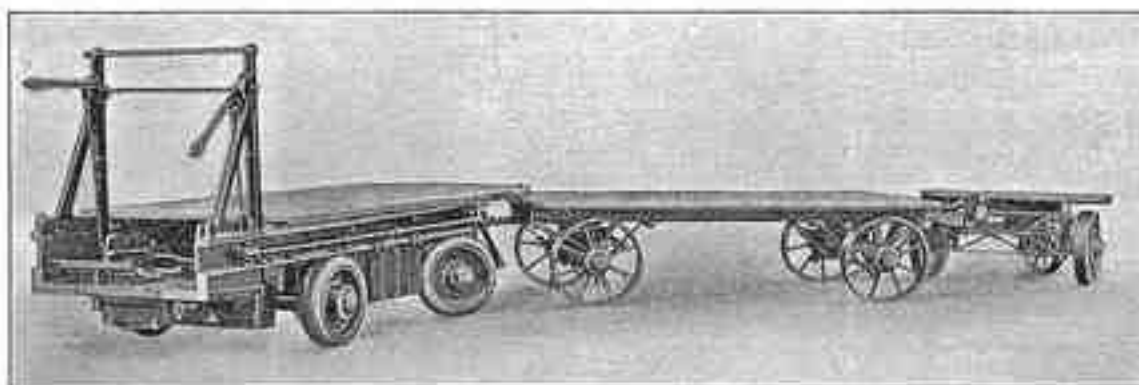

Foolproof.

ELECTROMOBILE Ltd.

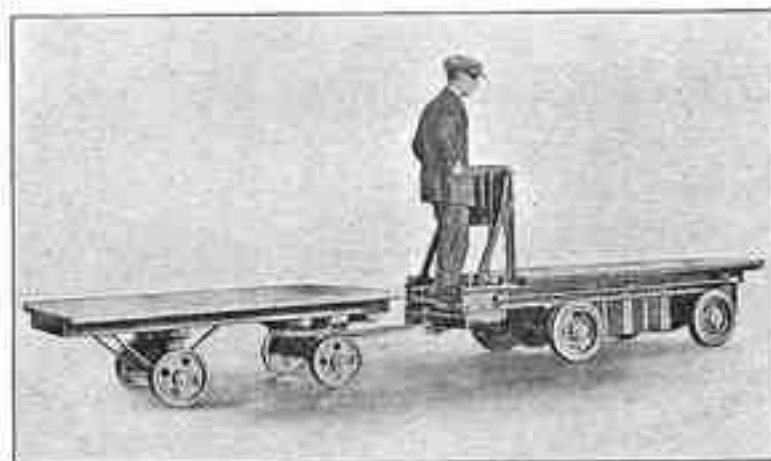

::

OTLEY, YORKS.

All Electromobile Trucks can be fitted with hauling connections and used as Tractors. One is here shown with a number of steel four wheel steer Trailers, which give absolutely correct tracking of Tractor and Trailers, for use in narrow passages.

**MAXIMUM
SERVICE**

**MINIMUM
COST**

Standard Trailer, constructed of hardwood, with 12-inch C.I. wheels and turntable steering.

One of three "A" type Trucks, with Trailers, in Government Clothing Factory. The girl drivers manipulate these with ease when hauling three to seven Trailers.
